

SALT-AWAY®

DIVE GEAR MAINTENANCE GUIDE

After every dive wash all your dive equipment in a 5-10% **Salt-Away** to fresh water mix, or use the **Salt-Away** mixing unit.

Regulators. At the end of each dive, carefully use air from the cylinder to blow away water and debris from the first stage inlet. Replace the dust cap on the first stage before cleaning. Wash carefully after every dive by soaking the regulator, dive computer, hoses and dive console in a 5% **Salt-Away** and fresh water mix, leaving overnight if possible, then remove from the mix and leave to air dry (no rinsing required).

BCDs. After diving, wash BCDs inside and outside using the **Salt-Away** mixing unit, or a 5% **Salt-Away** and fresh water mix in a bucket. No need to rinse with fresh water. Periodically rinse the inside with a weak disinfectant solution to kill any bacteria. Check for leaks before and after every dive.

Wetsuits. Using our **Salt-Away** mixing unit, or a 5% **Salt-Away** to fresh water mix, wash the suit inside and out. Clean and lubricate zips with the same **Salt-Away** mix to remove all salt.

Storing your dive gear after cleaning

When gear is dry, store it in a cool, dry, dark place, away from direct sunlight.

Soak or wash all the following in a 5% **Salt-Away** to fresh water mix after every dive:

- * Regulators/BCDs * goggles * snorkels
- * tanks & fittings * dive belts * flippers

* Note: Buckets of Salt-Away mix can be re-used over and over again. Cover and store to re-use after your next diving trip

Salt-Away breaks down and removes salt build-up with repeated use, and can safely be used on all metals, fibreglass, paint, rubber, plastic, chrome, glass, concrete, brick or any surface exposed to salt. Bombardier Recreational Products (USA) recommend **Salt-Away** for salt removal on all Evinrude, Johnson and Seadoo motors.

Salt-Away is made in the USA. For more information contact:
