## DIRECT INJECTION KIT

### FLUSHES YOUR INBOARD ENGINE IN SALT WATER

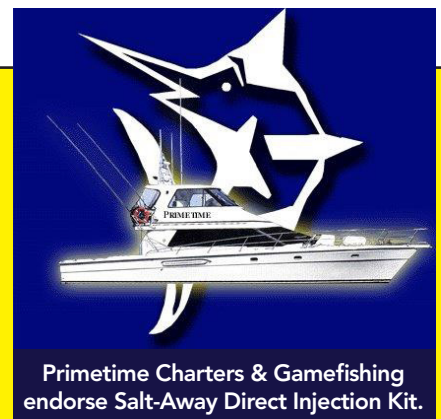

#### REMOTE CONTROL KIT

The Salt-Away Direct Injection Kit is designed for all moored vessels with inboard or inboard/outboard stern drive motors to flush and protect your expensive marine engines without leaving the helm. The Salt-Away Direct Engine Kit will connect to 12V power and has an adjustable regulating valve. No wiring is needed forward of the motor as you control the unit remotely using the remote control supplied. The Kit protects all open and closed circuit salt water cooling systems by injecting a 50/50 mixture of Salt-Away concentrate and fresh water. Salt-Away is designed to protect your engine's cooling system even when using it with salt water. The kit comes ready to install with all wiring, tubing and quick connect fittings to drill and tap into water strainer or water pump. Easy to install for single or twin engines and gen set. Our recommended dilution ratio is factory set to the number of engines you are flushing and the size of the engines.

The Salt-Away Direct Injection Kit can also be purchased without the remote control unit, but this requires wiring to the manual switch supplied 12V or 24V available. Once installed all you need to do is keep the reservoir topped up with Salt-Away concentrate and flush your engine for 30 seconds after every use.

Salt-Away concentrate is an advanced formula with a carefully selected blend of ingredients specifically chosen to provide the optimum concentration of well-known cleaning materials and surface-active agents, to provide salt removal from a wide variety of surfaces. Included in Salt-Away are liquid and vapour corrosion inhibitors. Tested for 18 months in salt water, this corrosion inhibitor works in liquid solutions and vapour solutions. The liquid and vapour corrosion inhibitors in the residue will not allow the salt crystals to attack and re-bond to the surface. Salt-Away's salt removing agent completely removes fresh salt and breaks down salt build up and blockages with repetitive use. Our recommended dilution ratio starts from 512 parts water to 1 part Salt-Away.

Primetime Charters & Gamefishing endorse Salt-Away Direct Injection Kit.

**100% NON-TOXIC | 100% BIODEGRADABLE | 100% NON HAZARDOUS**
